                                                                                                                                                                                                                                                                                                                 Sequence 3945, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC-007

CURRENT APPLICATION NUMBER: US/09/134,001C

CURRENT FILING DATE: 1998-08-13

PRIOR APPLICATION NUMBER: US 60/064,964

PRIOR APPLICATION NUMBER: US 60/055,779

PRIOR PRIOR TILING DATE: 1997-08-14
                                                                                                                                                                                                                             NUMBER OF SEQ ID NOS: 5674
SEQ ID NO 3945

The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L.
                                                                                                               21-MAR-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the Greenes, their use in the discovery of novel antibiotics, the essential Greenes, their use in the discovery of novel antibiotics, the essential Greenes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella Greenemoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The Crimention is calso useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used Crimentify proteins used in proliferation, to express these proteins, Crimentify proteins used in proliferation, to express these proteins, Crimentify proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen crimentify of organisms. The present sequence represents an Crimential prokaryotic cellular proliferation protein.

Crimentification but was actually in the protein and control of the control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                    CC prokaryotic cellular proliferation, their use in identifying the common and the encoded proteins. The prokaryotes used are CC genes, themselves and the encoded proteins. The prokaryotes used are CC Escherichia coil, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets correctly proteins used in proliferation, to express these proteins. CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins used in proliferation, to express these proteins. CC The proteins used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen compounds in rational drug discovery CC programmes. The artisense nucleic acid sequence is also useful to screen compounds in rational drug discovery CC avide variety of organisms. The present sequence is also useful to screen compounds in rational drug discovery CC avide variety of organisms. The present sequence represents an CC essential prokaryotic cellular proliferation protein.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB5300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification or nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.
Mycobacterium tuberculosis
                                                       Drug target; growth; organism viability; characterisation
                                                                                                               Mycobacterium tuberculosis potential drug target protein SEQ
                                                                                                                                                                                    04-SEP-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleotide sequence useful in the identification or Lactococcus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a method for identifying a nucleotide or polypeptide sequence that may be a drug target, or essential for growth or viability of an organism. Polynucleotide sequences AAH51947 - AAH52092 represent DNA encoding proteins AAG81096 - AAG81241, Mycobacterium tuberculosis proteins which are potential drug targets. The DNA and protein sequences are used to illustrate the method of the invention. The method involves providing an unknown nucleotide or polypeptide sequences, and comparing it to a number of sequences along with at least one algorithm capable of analysing a functional relationship between nucleotide and polypeptide sequences. The method is useful for characterising the function of nucleic acids and polypeptides that may be useful as a target for a drug or essential for the growth or viability of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              12-NOV-1999;

                                                                                                                                                                                                                                                                                                                                                                                       or inhibit the function of (I) selected from: (a) measuring the binding of a candidate compound to the polypeptide using a label; (b) measuring the binding of a candidate compound to (I) in the presence of a labeled competitor; (c) testing whether the candidate compound results in a signal generated by activation or inhibition of (I); or (d) detecting the effect of a candidate compound on the production of mRNA encoding (I) using e.g. enzyme linked immunosorbent assay (ELISA). AAY91108 to AAY91111 are useful as vaccines for treating microbial infections such as Staphylococcus, Streptococcus and Escherichia coli infections. The polypeptides are also useful for screening for antibacterial compounds and for detecting diseases associated with microbial infections. The present sequence represents Staphylococcus monomeric FtsZ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes isolated multimeric FtsZ:FtsA polypeptides (I) comprising the protein sequences given in AAY91108, AAY91110 and AAY91111. Also described are: (I) an antibody (Ab) specific for (I); (2) a method (M1) for treating an individual requiring enhanced or reduced activity or expression of (I) comprising administering an agonist or antagonist to (I), respectively; (3) a method (M2) for diagnosing a disease or susceptibility to a disease related to expression or activity of (I) comprising determining the presence or absence of a mutation in the nucleotide sequence encoding (I) and/or analysing for the presence or quantity of (I) in a sample; and (4) a method (M3) for screening to identify compounds that activate
                                                                                                                                                                                                                                                                                                                                                     Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the S. pneumoniae monomeric filamentation temperature sensitive protein (FtsZ). This is related by amino acid sequence homology to Lactococcus lactis FtsZ AAU74322. Multimeric FtsZ protein is useful in identifying compounds that modulate its function. The protein and its variants are useful in diagnosing and treating microbial diseases and for prophylactic use in dental treatment. They can be used as vaccines to prevent wound infections by bacteria especially S. pneumoniae. Agonists and antagonists are useful in treating diseases caused by Helicobacter pylori infections e.g. gastrointestinal cancer, gastric ulcer and gastritis.

                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumonlae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                               Š
                                                                                                                                                                                                                                        The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the CC genes, their use in the discovery of novel antibiotics, the essential CC genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are Escherichia coll, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used CC identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen CC of which the sequence is also useful to screen CC a wide variety of organisms. The present sequence represents an CC essential prokaryotic cellular proliferation protein.
                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (AAV65301 to AAV65304) from the S. pneumoniae genome and corresponding protein sequences(AAW80605 to AAW80728). A recombinant host containing a vector comprising any of the above nucleic acids can be used for the recombinant expression of the protein sequences. The invention also provides a DNA chip having arrayed on it at least 15 base pair fragment of any one or more of these DNA sequences. The DNA chip can be used methods for evaluating gene expression in S. pneumoniae and for identifying virulence genes in S. pneumoniae. Antibodies that selectively bind to the above proteins or peptide fragments can be used to treat S. pneumoniae infection. The antibodies can also be used to

                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the infectious organism to drugs. FtsZ polypeptides and polynucleotides are also useful for screening for antagonists, agonists and drugs against infectious micro-organisms. FtsZ agonists and antagonists are bacteriostatic and bacteriocidal compounds which can be used in treatment to enhance (agonist) or block (antagonist or antisense sequence) ftsZ activity, therefore treating microbial diseases, especially Streptococcus pneumoniae diseases including otitis media, bacteraemia, conjunctivitis, pneumonia, sinusitis, pleural empyema, endocarditis and especially meningitis. Epitopes of ftsZ polypeptides and polynucleotides are useful immunogens for producing anti-ftsZ antibodies for prevention of bacterial infections, and ftsZ polynucleotions can be used in genetic immunisation (gene therapy) to prevent infections. FtsZ polypeptides, polynucleotides and their (ant)agonists can prevent adhesion of bacteria to matrix proteins, and are useful ruse on wounds and body implants to prevent actions infections and are useful constituted and constitute the prevent actions and body implants to prevent actions and sequence of the constitutions and sequence of the constitutions and constitutions are useful constitutions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is ftsZ polypeptide isolated from Streptococcus pneumoniae. FtsZ polypucleotides and polypeptides are useful for diagnosing susceptibility of diseases by detecting mutations or polymorphisms in the ftsZ gene or analysing for the presence of amount ftsZ polypeptide expressed in a patient sample. FtsZ PCR probes are useful for diagnosing diseases, and can characterise the response of the probability of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proteins, and are useful for use on wounds and body implants to prevent bacterial infection. FtsZ polypeptides and polynucleotides may also be used as reagents for differential screening methods e.g. using ftsZ probes in RT-PCR to identify and quantify genes expressed in bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Streptococcus pneumoniae ftsZ polypeptide and polynucleotide useful as diagnostic reagents and for prevention and treatment of Streptococci infections which cause bacteraemia, otitis media and

                                                                                                                                                                                                                                                                                                                                                                                                                       temperature sensitive protein (FtsZ). This is related by amino acid sequence homology to Lactococcus lactis FtsZ AAU74322. Multimeric FtsZ protein is useful in identifying compounds that modulate its function. The protein and its variants are useful in diagnosing and treating microbial diseases and for prophylactic use in dental treatment. They can be used as vaccines to prevent wound infections by bacteria especially S. pneumoniae. Agonists and antagonists are useful in treating diseases caused by Helicobacter pulpori infections e.g.

                                                                                                                                                                                                                                            to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                        prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium. and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16-DEC-1999; 99JP-0377484.
